

A-Z OF TILING

Every week as part of our “Stay Positive, Back Stronger” campaign we will be providing you with our A-Z of Tiling Terms. Get in-depth description of many of the common tiling terms, plus some expert insight or top tips from our team.

X

X-RAY DIFFRACTION (TEST FOR TILES)

A test used to identify a material's crystalline components by comparing the diffraction spectra with those of known materials. Not applicable to glass, which has a non-crystalline nature.

BAL INSIGHT

X-Ray Diffraction can be used to measure the physical properties, chemical composition and crystalline structures in ceramics.
